

NBI 100 and NBI 150 Review Cruise®

Northwestern Medical Review USMLE and COMLEX Cruise® courses are products of a decade of painstaking research and development. These review plans are memorable cruise courses through the most notable tested concepts of your examination. Since operation of our first cruise version in January of 2004, Northwestern has once again reaffirmed that it is by far the forerunner of educational innovations. From the moment that students step into our classrooms, they are astounded by what they see or hear. Our Cruise Review® is filled with boatloads of board-relevant activities, wonderful top-tested adventures, amazing excursions and unforgettable experiences.

Please see below our first course slide and read what our cruise captain has to tell you as soon as you walk into our classes. It will say it all.

Please note that above map only includes a few of the scenic islands that you will visit when you travel with Northwestern Medical Review Cruise Line.

We Are Now Boarding

Dear Passenger,

The Medical Licensure examination that you will be taking after this course is an integrated exam. As you navigate through the exam the only logical concept that will tie the two adjoining test questions for you would be the chronological order of the items. The exam will take you on a journey through concepts that you have covered during the first two years of medical school. This course is designed to equip you with the basic survival tools for this journey of yours.

You are about to step onto this cruise-course and cover an ocean of relevant exam materials within a short time. As we progress on our journey, you will witness the top attractions of your examination. We have selected a unique path that will take you to the most scenic islands in the ocean of board-prep materials. From Eyeland to Psycho Rica, from Jazzabelanca de Acidica to Murmaid Islands, and from Glygan Island to Antcancertica we will navigate only through the must-see attractions. While on the cruise, you will be involved in so many activities that you may barely notice the mileage we cover in between the isles. The variety of concepts, their mode of presentation and our cruise speed are designed to minimize boredom and maximize retention of the covered materials. You may, however, choose to forfeit visiting a particular island because you (and your friends) might be familiar with its attractions. In that case all you need to do is to let the captain know which island you would like to avoid and which one to spend more time on.

Before starting our cruise, we would like to give you one final note and one word of caution. The final note is that our path of navigation would be the TALLP Test-taking Principles. These principles will mark our oceanic path during our journey. You might have already received your Primary Care Book with its audio CDs and may be familiar with the contents of the book. That book is loaded with must-know high-yield facts; we will, however, have the opportunity to cover the top of the list materials from it for you. Regarding the word of caution; we would like to warn you that if you are allergic to sea-motion you may only purchase "*lotion of motion*" on the Autonomba Island!

Welcome aboard!

Your Captain
